## Agrobacterium Protocols: Volume 1 (Methods in Molecular Biology)

Rapid changes and significant progress have been made in the *Agrobacterium* field, such as genetically transforming plants for both basic research purposes and agricultural development. In *Agrobacterium Protocols, Third Edition, Volumes 1 and 2*, a team of leading experts and veteran researchers describe in detail techniques for delivering DNA to plant cells and permanently altering their genomes. This edition emphasizes agricultural crops and plant species with economic values, with updated protocols on 32 plant species and protocols involving 19 new species. Together with the 1<sup>st</sup> and 2<sup>nd</sup> editions, these two volumes offer *Agrobacterium*-mediated genetic transformation protocols for a total of 76 plant species. For a number of important plants such as rice, barley, wheat and citrus, multiple protocols using different starting plant materials for transformation are included.

*Volume 1* details updated techniques available for 18 plant species drawn from cereal crops, legume plants, vegetable plants, and three model plant species: *Brachypodium distachyon*, *Medicago truncatula*, and *Setaria viridis*. It also updates a chapter for vector construction, a step critical to a successful plant transformation process. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls.

Authoritative and cutting-edge, *Agrobacterium Protocols, Third Edition* facilitates the transfer of this rapidly developing technology to all researchers for use in both fundamental and applied biology.
