Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) Fred H. Croom

This text is intended as a one semester introduction to algebraic topology at the undergraduate and beginning graduate levels. Basically, it covers simplicial homology theory, the fundamental group, covering spaces, the higher homotopy groups and introductory singular homology theory. The text follows a broad historical outline and uses the proofs of the discoverers of the important theorems when this is consistent with the elementary level of the course. This method of presentation is intended to reduce the abstract nature of algebraic topology to a level that is palatable for the beginning student and to provide motivation and cohesion that are often lacking in abstract treatments. The text emphasizes the geometric approach to algebraic topology and attempts to show the importance of topological concepts by applying them to problems of geometry and analysis. The prerequisites for this course are calculus at the sophomore level, a one semester introduction to the theory of groups, a one semester introduction to point-set topology and some familiarity with vector spaces. Outlines of the prerequisite material can be found in the appendices at the end of the text. It is suggested that the reader not spend time initially working on the appendices, but rather that he read from the beginning of the text, referring to the appendices as his memory needs refreshing. The text is designed for use by college juniors of normal intelligence and does not require "mathematical maturity" beyond the junior level.

From reader reviews:

Betty Casas:

Do you have favorite book? In case you have, what is your favorite's book? Book is very important thing for us to be aware of everything in the world. Each book has different aim or perhaps goal; it means that reserve has different type. Some people experience enjoy to spend their a chance to read a book. They are really reading whatever they have because their hobby is usually reading a book. Why not the person who don't like reading a book? Sometime, man or woman feel need book when they found difficult problem or maybe exercise. Well, probably you should have this Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics).

Marvin Seto:

This Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) book is not really ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is information inside this guide incredible fresh, you will get data which is getting deeper you actually read a lot of information you will get. This specific Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) without we understand teach the one who examining it become critical in considering and analyzing. Don't become worry Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) can bring whenever you are and not make your bag space or bookshelves' come to be full because you can have it inside your lovely laptop even mobile phone. This Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) having very good arrangement in word in addition to layout, so you will not truly feel uninterested in reading.

Ok Lord:

Reading a publication tends to be new life style on this era globalization. With looking at you can get a lot of information that could give you benefit in your life. Along with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Lots of author can inspire their particular reader with their story or their experience. Not only the storyline that share in the guides. But also they write about the information about something that you need example. How to get the good score toefl, or how to teach your children, there are many kinds of book that exist now. The authors these days always try to improve their ability in writing, they also doing some investigation before they write on their book. One of them is this Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics).

Stacy Knarr:

That book can make you to feel relax. That book Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) was colorful and of course has pictures on there. As we know that book Basic Concepts of Algebraic Topology (Undergraduate Texts in Mathematics) has many kinds or style. Start from kids until teens. For example Naruto or Detective Conan you can read and think you are the character on

there. Therefore not all of books usually are made to bore you, any that makes you feel happy, fun and loosens you up. Try to choose the best book to suit your needs and try to like reading which.
