# Technological and Social Dimensions of the Green Revolution: Connecting Pasts and Futures

## **Technological and Social Dimensions of the Green Revolution: Connecting Pasts and Futures**

Rising concerns about agricultural productivity and food security in rapidly changing economic and environmental contexts have led to renewed interest in agricultural development. But the extent to which new policies and programs will enable socially just and environmentally sustainable futures for rural communities remains a matter of intense debate. This book contributes to such debates by critically examining the intersection of agricultural histories, heterogeneous social contexts and new technological developments in rural communities across the Global South. It shows how experiences of the previous Green Revolution can inform new agricultural programs and enable equitable and participatory development in rural places. Through close engagement with rural communities, this book ensures that rural voices become part of the debate on agricultural development and suggests pathways for building on the gains of the Green Revolution without necessarily repeating its problematic social, technological and environmental aspects.

This book was published as a special issue of the *International Journal of Agricultural Sustainability*.
