Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications)
Weijia Jia, Wanlei Zhou

Both authors have taught the course of "Distributed Systems" for many years in the respective schools. During the teaching, we feel strongly that "Distributed systems" have evolved from traditional "LAN" based distributed systems towards "Internet based" systems. Although there exist many excellent textbooks on this topic, because of the fast development of distributed systems and network programming/protocols, we have difficulty in finding an appropriate textbook for the course of "distributed systems" with orientation to the requirement of the undergraduate level study for today's distributed technology. Specifically, from - to-date concepts, algorithms, and models to implementations for both distributed system designs and application programming. Thus the philosophy behind this book is to integrate the concepts, algorithm designs and implementations of distributed systems based on network programming. After using several materials of other textbooks and research books, we found that many texts treat the distributed systems with separation of concepts, algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design, prototyping and implementations. This book intends to enable readers, especially postgraduates and senior undergraduate level, to study up-to-date concepts, algorithms and network programming skills for building modern distributed systems. It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices.

From reader reviews:

Nancy Rush:

With other case, little individuals like to read book Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications). You can choose the best book if you appreciate reading a book. Provided that we know about how is important the book Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications). You can add expertise and of course you can around the world by the book. Absolutely right, due to the fact from book you can know everything! From your country till foreign or abroad you will find yourself known. About simple thing until wonderful thing you are able to know that. In this era, we are able to open a book or even searching by internet system. It is called e-book. You need to use it when you feel uninterested to go to the library. Let's read.

Faye Michaels:

Now a day individuals who Living in the era everywhere everything reachable by connect to the internet and the resources within it can be true or not need people to be aware of each data they get. How individuals to be smart in acquiring any information nowadays? Of course the answer is reading a book. Looking at a book can help folks out of this uncertainty Information mainly this Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications) book because this book offers you rich information and knowledge. Of course the knowledge in this book hundred per cent guarantees there is no doubt in it everbody knows.

Richard Eby:

This book untitled Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications) to be one of several books that will best seller in this year, that is because when you read this guide you can get a lot of benefit into it. You will easily to buy this book in the book store or you can order it by using online. The publisher of the book sells the e-book too. It makes you more easily to read this book, as you can read this book in your Mobile phone. So there is no reason for you to past this reserve from your list.

Richard Taylor:

In this era globalization it is important to someone to obtain information. The information will make anyone to understand the condition of the world. The health of the world makes the information easier to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can view that now, a lot of publisher that print many kinds of book. The particular book that recommended for you is Distributed Network Systems: From Concepts to Implementations (Network Theory and Applications) this publication consist a lot of the information of the condition of this world now. This specific book was represented how can the world has grown up. The terminology styles that writer value to explain it is easy to understand. Often the writer made some exploration when he makes this book. This is why this book

appropriate all of you.
