Guided Wave Optics and Photonic Devices (Optics and Photonics)

Guided Wave Optics and Photonic Devices (Optics and Photonics)

Guided Wave Optics and Photonic Devices introduces readers to a broad cross-section of topics in this area, from the basics of guided wave optics and nonlinear optics to biophotonics. The book is inspired by and expands on lectures delivered by distinguished speakers at a three-week school on guided wave optics and devices organized at the CSIR-Central Glass and Ceramic Research Institute in Kolkata in 2011.

An Introduction to Guided Wave Optics and Photonic Devices: Principles, Applications, and Future Directions

The book discusses the concept of modes in a guided medium from first principles, emphasizing the importance of dispersion properties in optical fibers. It describes fabrication and characterization techniques of rare-earth-doped optical fibers for amplifiers and lasers, with an eye to future applications. Avoiding complex mathematical formalism, it also presents the basic theory and operational principles of fiber amplifiers and lasers. The book examines techniques for writing fiber Bragg gratings, which are of particular interest for smart sensing applications. A chapter focuses on the fundamental principles of Fourier optics and its implementation in guided wave optics.

In addition, the book explains the critical phenomena of soliton dynamics and supercontinuum generation in photonic crystal fiber, including its fabrication process and characteristics. It also looks at plasmonics in guided media and nonlinearity in stratified media?both key areas for future research. The last chapter explores the importance of lasers in biophotonic applications.

Written by experts engaged in teaching, research, and development in optics and photonics, this reference brings together fundamentals and recent advances in one volume. It offers a valuable overview of the field for students and researchers alike and identifies directions for future research in guided wave and photonic device technology.

From reader reviews:

Nathan Ware:

The book Guided Wave Optics and Photonic Devices (Optics and Photonics) can give more knowledge and information about everything you want. Exactly why must we leave the best thing like a book Guided Wave Optics and Photonic Devices (Optics and Photonics)? Several of you have a different opinion about guide. But one aim that book can give many facts for us. It is absolutely suitable. Right now, try to closer together with your book. Knowledge or details that you take for that, you could give for each other; you may share all of these. Book Guided Wave Optics and Photonic Devices (Optics and Photonics) has simple shape however, you know: it has great and massive function for you. You can seem the enormous world by wide open and read a guide. So it is very wonderful.

Jill Davis:

Reading a publication can be one of a lot of exercise that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people love it. First reading a book will give you a lot of new facts. When you read a reserve you will get new information due to the fact book is one of a number of ways to share the information or their idea. Second, looking at a book will make anyone more imaginative. When you studying a book especially hype book the author will bring someone to imagine the story how the personas do it anything. Third, you can share your knowledge to other individuals. When you read this Guided Wave Optics and Photonic Devices (Optics and Photonics), it is possible to tells your family, friends as well as soon about yours guide. Your knowledge can inspire others, make them reading a guide.

John King:

The reserve untitled Guided Wave Optics and Photonic Devices (Optics and Photonics) is the book that recommended to you to read. You can see the quality of the publication content that will be shown to an individual. The language that publisher use to explained their ideas are easily to understand. The copy writer was did a lot of exploration when write the book, hence the information that they share for your requirements is absolutely accurate. You also could get the e-book of Guided Wave Optics and Photonic Devices (Optics and Photonics) from the publisher to make you considerably more enjoy free time.

William Littlejohn:

Your reading 6th sense will not betray you, why because this Guided Wave Optics and Photonic Devices (Optics and Photonics) guide written by well-known writer we are excited for well how to make book that could be understand by anyone who have read the book. Written throughout good manner for you, leaking every ideas and publishing skill only for eliminate your personal hunger then you still hesitation Guided Wave Optics and Photonic Devices (Optics and Photonics) as good book not merely by the cover but also by content. This is one book that can break don't evaluate book by its handle, so do you still needing another sixth sense to pick this specific!?! Oh come on your studying sixth sense already told you so why you have to listening to another sixth sense.
