Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science)

Oliver Schabenberger, Carol A. Gotway

Understanding spatial statistics requires tools from applied and mathematical statistics, linear model theory, regression, time series, and stochastic processes. It also requires a mindset that focuses on the unique characteristics of spatial data and the development of specialized analytical tools designed explicitly for spatial data analysis. *Statistical Methods for Spatial Data Analysis* answers the demand for a text that incorporates all of these factors by presenting a balanced exposition that explores both the theoretical foundations of the field of spatial statistics as well as practical methods for the analysis of spatial data.

This book is a comprehensive and illustrative treatment of basic statistical theory and methods for spatial data analysis, employing a model-based and frequentist approach that emphasizes the spatial domain. It introduces essential tools and approaches including: measures of autocorrelation and their role in data analysis; the background and theoretical framework supporting random fields; the analysis of mapped spatial point patterns; estimation and modeling of the covariance function and semivariogram; a comprehensive treatment of spatial analysis in the spectral domain; and spatial prediction and kriging. The volume also delivers a thorough analysis of spatial regression, providing a detailed development of linear models with uncorrelated errors, linear models with spatially-correlated errors and generalized linear mixed models for spatial data. It succinctly discusses Bayesian hierarchical models and concludes with reviews on simulating random fields, non-stationary covariance, and spatio-temporal processes.

Additional material on the CRC Press website supplements the content of this book. The site provides data sets used as examples in the text, software code that can be used to implement many of the principal methods described and illustrated, and updates to the text itself.

From reader reviews:

Michael Pauls:

What do you think about book? It is just for students because they are still students or this for all people in the world, what the best subject for that? Only you can be answered for that query above. Every person has different personality and hobby per other. Don't to be compelled someone or something that they don't wish do that. You must know how great along with important the book Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science). All type of book is it possible to see on many methods. You can look for the internet methods or other social media.

Claudia Weidner:

This Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) book is just not ordinary book, you have after that it the world is in your hands. The benefit you have by reading this book is definitely information inside this book incredible fresh, you will get data which is getting deeper anyone read a lot of information you will get. That Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) without we know teach the one who looking at it become critical in contemplating and analyzing. Don't become worry Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) can bring whenever you are and not make your bag space or bookshelves' become full because you can have it with your lovely laptop even mobile phone. This Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) having fine arrangement in word as well as layout, so you will not sense uninterested in reading.

Beth Murray:

A lot of people always spent all their free time to vacation as well as go to the outside with them household or their friend. Are you aware? Many a lot of people spent they free time just watching TV, or maybe playing video games all day long. If you want to try to find a new activity here is look different you can read a new book. It is really fun in your case. If you enjoy the book that you read you can spent all day every day to reading a publication. The book Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) it is quite good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. In the event you did not have enough space bringing this book you can buy the e-book. You can m0ore simply to read this book from the smart phone. The price is not very costly but this book has high quality.

Helen Woodson:

Beside that Statistical Methods for Spatial Data Analysis (Chapman & Hall/CRC Texts in Statistical Science) in your phone, it may give you a way to get closer to the new knowledge or details. The information and the knowledge you are going to got here is fresh from oven so don't be worry if you feel like an older people live in narrow village. It is good thing to have Statistical Methods for Spatial Data Analysis

(Chapman & Hall/CRC Texts in Statistical Science) because this book offers for you readable information. Do you occasionally have book but you don't get what it's all about. Oh come on, that will not happen if you have this inside your hand. The Enjoyable blend here cannot be questionable, just like treasuring beautiful island. Use you still want to miss that? Find this book along with read it from today!
